

Facility Based CLEC Activation Requirements**Section VI****Local
Interconnection
Services*****UIT-S may be provisioned between switching locations in the following combinations:***

- BellSouth end office to BellSouth tandem (BEBT) - Carries the originating traffic of a CLEC end user (that utilizes BellSouth's Unbundled Local Switching and Unbundled Tandem Switching elements) to the BellSouth tandem. This traffic could be originating local, toll or access usage.
- BellSouth tandem to BellSouth end office/CLEC Switch (BTBE/S) - Transports traffic from a CLEC end user (that utilizes BellSouth's Unbundled Local Switching and Unbundled Tandem Switching elements) from the BellSouth tandem to another BellSouth end office that sub-tends that BellSouth tandem or to an CLEC Switch location. (Note: If the CLEC Switch location is in a different LATA, an interconnection point to where traffic will be delivered must be defined.) This traffic could be originating local, toll or access traffic from a CLEC end user or could be terminating 800, toll or Access traffic from a CLEC end user.

BASIC SERVICE CAPABILITIES AND RESTRICTIONS

CLECs will utilize UIT-S to originate their local, toll and access traffic and terminate their toll and access traffic within the BellSouth Region (including Independent Company territories). Various call flow diagrams have been developed that provide details of how UIT-S will be utilized. These call flows are found in at the end of this "UIT— S" chapter.

The SS7 network will be utilized for call set-up. This network will establish the physical connections for the call and will also determine when busy conditions exist.

CLECs will be required to interconnect with at least one BellSouth tandem in each LATA. For toll traffic, it is possible that toll tandem to toll tandem connections will be utilized. The possibility of having a tandem to tandem connection is shown in Figure I-1. There will be two basic configurations for this UNE depending on whether the CLECs utilize their own local switch or whether the CLECs are switchless providers.

Facility Based CLEC Activation Requirements**Section VI****Local
Interconnection
Services**

When CLECs provide their own switch, BellSouth will deliver traffic destined to their switch to the CLEC's switch. In this case, the interoffice mileage will be computed based on the airline mileage between the originating BellSouth End Office and the CLEC's Switch regardless of how the call is actually routed. If the CLEC switch is not within the originating LATA, an interconnection point within the LATA must be identified. If the call is an Access call, the interoffice mileage will be computed based on the airline mileage between the BellSouth End Office and the Serving Wire Center of the Interexchange Carrier Point of Presence or to the Tandem if the Interexchange Carrier has collocated in the Tandem. Figure I-1 depicts several routing possibilities. The solid line between the BellSouth End Office and the BellSouth Tandem and between the BellSouth Tandem and the CLEC switch will be the typical configuration. As mentioned earlier, it is possible that the call could actually route through two toll tandem offices. It is also possible that BellSouth could establish shared trunk groups between the BellSouth End Office and the CLEC switch. A meld of these possible configurations will be utilized to determine the cost for this UNE.

When CLECs are switchless providers, they will utilize BellSouth switches to originate and terminate their calls. In this case, the interoffice mileage will be computed based on the airline mileage between the originating BellSouth End Office and the terminating BellSouth End Office regardless of how the call is actually routed. (Note: No distinction will be made in computing the mileage if the Serving Wire Center has its own switch or if the Serving Wire Center is utilizing a remote switch.) Figure I-1 depicts several routing possibilities. The solid line between the originating BellSouth End Office and the BellSouth Tandem and between the BellSouth Tandem and the terminating BellSouth End Office will be the typical configuration. As mentioned earlier, it is possible that the call could actually route through two toll tandem offices. It is also possible that the BellSouth Tandem could establish shared direct trunk groups between the originating BellSouth End Office and the terminating BellSouth End Office. A meld of these possible configurations was utilized to determine the cost for this UNE.

Facility Based CLEC Activation Requirements**Section VI****Local
Interconnection
Services**

HOW DOES THIS SERVICE WORK?

UIT-S is not ordered by the CLEC. Billing for UIT-S will be done based on minutes of use and mileage. UIT-S provides a transmission path, and its associated electronics, between switching locations. These facilities/trunk groups are shared among network providers. These facilities/trunk groups may be configured in various transmission configurations (e.g., DS1, DS3, etc.) based on total shared network requirements between switching locations. Depending on the distance between switching locations and the total service demands required, different combinations of SONET interoffice facilities will be utilized to transport the DS1 facilities carrying these shared trunk groups.

Facility Based CLEC Activation Requirements

Section VI

**Local
Interconnection
Services****General Description of Performance Standards and Reliability**

Trunk Group Service Performance Objectives:

- Final Trunk Groups between an CLEC Switch and BellSouth Switch carrying Local traffic:
 - The Design Blocking Objective is 1.0% during the Average Time Consistent Busy Hour over a 20-day period. These trunk groups are monitored for blockages on a weekly basis
 - Trunk Group measurements on these trunk groups can be provided on a reciprocal basis. Since these trunks carry traffic from BellSouth to a CLEC, we need the CLEC to provide BellSouth with measurements to show that there is parity on provisioning and maintenance.
- Final Trunk Groups between BellSouth Switches carrying Local traffic:
 - The Design Blocking Objective is 1.0% during the Average Time Consistent Busy Hour over a 20-day period. These trunk groups are monitored for blockages on a weekly basis
 - There are no parity measurements on these trunk groups since they are shared resources with all of the parties receiving the same level of service. A CLEC call accesses the trunk groups in the same manner as a BellSouth call
- This UNE will be designed to meet the transmission standards in our technical publications similar to those facilities used for Common Transport Trunk Groups.
 - Diversity Requirements: No requirements for UNEs but some level of diversity will exist in BellSouth network (embedded and forward looking)
 - Performance Monitoring: No specific requirement, however, network element will be monitored as part of BellSouth network infrastructure.
- Special Considerations
 - None
 - Billing Guarantees do not apply
 - Blocking Performance reports – none

Facility Based CLEC Activation Requirements**Section VI****Local
Interconnection
Services*****Credit Terms***

Since these charges are on a usage sensitive basis, there are no customer commitments for this service. There also are no volume or term options for this service.

Deployment Schedule

Ubiquitous deployment assuming current Central Office capabilities

FEATURE INTERACTION

Customers purchasing this UNE will also be billed the Unbundled Tandem Switching (UTS) and must have purchased an Unbundled Local Switching (ULS) port.

Facility Based CLEC Activation Requirements

Section VI

**Local
Interconnection
Services****UNBUNDLED DRY FIBER**

BASIC SERVICE FEATURES

Unbundled Dry Fiber (UDF) is offered as a point-to-point arrangement between a CLEC -designated premise and a BellSouth Wire Center or between BellSouth Wire Centers. This arrangement consists of four optical fibers and fiber terminating equipment as shown in Figure 1-1. UDF is offered without optical signal regeneration to compensate for signal losses.

BellSouth reserves the right to rearrange its network and to modify the manner in which it provides service in order to meet its overall service requirements. This includes, but is not limited to, the right to engineer and construct its fiber optic facilities in accordance with its normal operations without the requirement to modify its materials, splicing techniques, or planned facility rearrangements to suit a specific CLEC request.

Facility Based CLEC Activation Requirements

Section VI

**Local
Interconnection
Services**

UDF Architecture—

BASIC SERVICE CAPABILITIES AND RESTRICTIONS

BellSouth makes no representations regarding the transmission capability of the facilities.

Facility Based CLEC Activation Requirements

Section VI

**Local
Interconnection
Services**

HOW DOES THIS SERVICE WORK?

UDF can be ordered to utilize BellSouth fiber optic facilities to complete a service that they are providing for its end user or to construct its own network.

General Description of Performance Standards and Reliability**Service Performance Objectives:**

There will not be any specified performance objectives for UDF. However, at the request of the CLEC, if made prior to the installation of the facilities, BellSouth will attempt to estimate the transmission loss of the channel at the CLEC 's intended transmission wavelength. BellSouth does not warrant that the CLEC 's channel will operate at that estimated loss or that the transmission loss will remain constant during the period in which the CLEC obtains the facilities from BellSouth.

Diversity Requirements:

No requirements for UNEs but some level of diversity will exist in BST network (embedded and forward looking)

Performance Monitoring

None

Special Considerations

Billing Guarantees do not apply

Deployment Schedule

UDF will only be available, where spare fibers exist, in states where the commission has ordered for it to be considered as a UNE. These states are Georgia, Tennessee, and Kentucky. Petitions For Reconsideration have been filed or will be filed in all of these states and if the initial orders are overturned, BellSouth will no longer offer UDF as a UNE.

Installation: Individual Case Basis

Repair: Same as FCC Tariff Dry Fiber Arrangements

Facility Based CLEC Activation Requirements**Section VI****Local
Interconnection
Services**

[REDACTED]

A Service Inquiry will be required for UDF requests in order to determine spare fiber availability and installation interval due to splicing requirements.

All CLEC requests for UDF should be sent to the LCSC via an ASR with UNE** (where ** is a number representing UDF. These requests will have the same field requirements as Special Access services as far as NC, NCI, SECNCI, ACTL, SECLOC, ACNA, and other fields. The LCSC will then issue a Service Order for a CLS circuit to CABS. These requests will have the same field requirements as Special Access Dry Fiber Arrangements as far as NC, NCI, SECNCI, ACTL, SECLOC, ACNA, and other fields.

[REDACTED]

Customer Education for the ordering of UDF is available upon request from the CLEC Account Team.

Facility Based CLEC Activation Requirements**Section VI****Local
Interconnection
Services****UNBUNDLED CHANNELIZATION**

BASIC SERVICE FEATURES

Unbundled Channelization (UC) provides the multiplexing capability that will allow a DS1 or DS3 UNE or collocation cross-connect to be channelized at a BellSouth central office. This can be accomplished through the use of a stand-alone multiplex or a digital cross-connect system at the discretion of BellSouth. The CLEC can activate channels all at once or on an as-needed basis once the UC UNE been installed by connecting lower level UNEs via Unbundled Channel Interfaces (UCIs).

BASIC SERVICE CAPABILITIES AND RESTRICTIONS

The initial set of Central Office channelization capabilities will be as follows:

DS3 Central Office Channelization System (UC-DS3): An element that channelizes a DS3 signal into 28 DS1s

DS1 Central Office Channelization System (UC-DS1): An element that channelizes a DS1 signal into 24 DS0s

Central Office Channel Interfaces (UCI): Elements that can be activated on a channelization system.

DS1 Central Office Channel Interface (UCI-DS1) elements can be activated on a DS3 Channelization System (UC-DS3)

Voice Grade (UCI-VG) or Digital Data (UCI-DS0) Channel Interfaces can be activated on a DS1 Channelization System (UC-DS1).

AMI and B8ZS line coding with either Super Frame (SF) and Extended Super Frame (ESF) framing formats will be supported.

Facility Based CLEC Activation Requirements

Section VI

Local Interconnection Services

HOW DOES THIS SERVICE WORK?

UC allows the CLEC to build channelized facilities that can interconnect with lower level UNEs in a more efficient manner. One example is shown in Figure 1-1 below. In this case, the CLEC is collocated in a BellSouth Central Office and chooses to interface with DS1 level cross-connects that are then channelized into 24 DS0s for interfacing with DS0 level UNEs (i.e., UVLs, UDLs).

Unbundled Channelization Example
